DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or disclose or make obvious a method for forming bonding pads of a semiconductor substrate, comprising inter alia: depositing a layer of photosensitive polyimide over a passivation layer filling keyholes between closely spaced interconnect lines. Dass et al. (6,143,668) in view of Fu et al. (5,807,787) disclose said method, except Fu discloses forming photosensitive polyimide over passivation layers (col.5 lines 40-45) between closely spaced bonding pads (col.7 lines 57-61). Keyholes or microscopic openings are specific features that occur in an insulative layer between closely spaced bond pads or interconnect lines (Applicant's specification p.5), and are not defined as simply the space between said closely spaced bond pads or interconnect lines.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
